PHASE 1

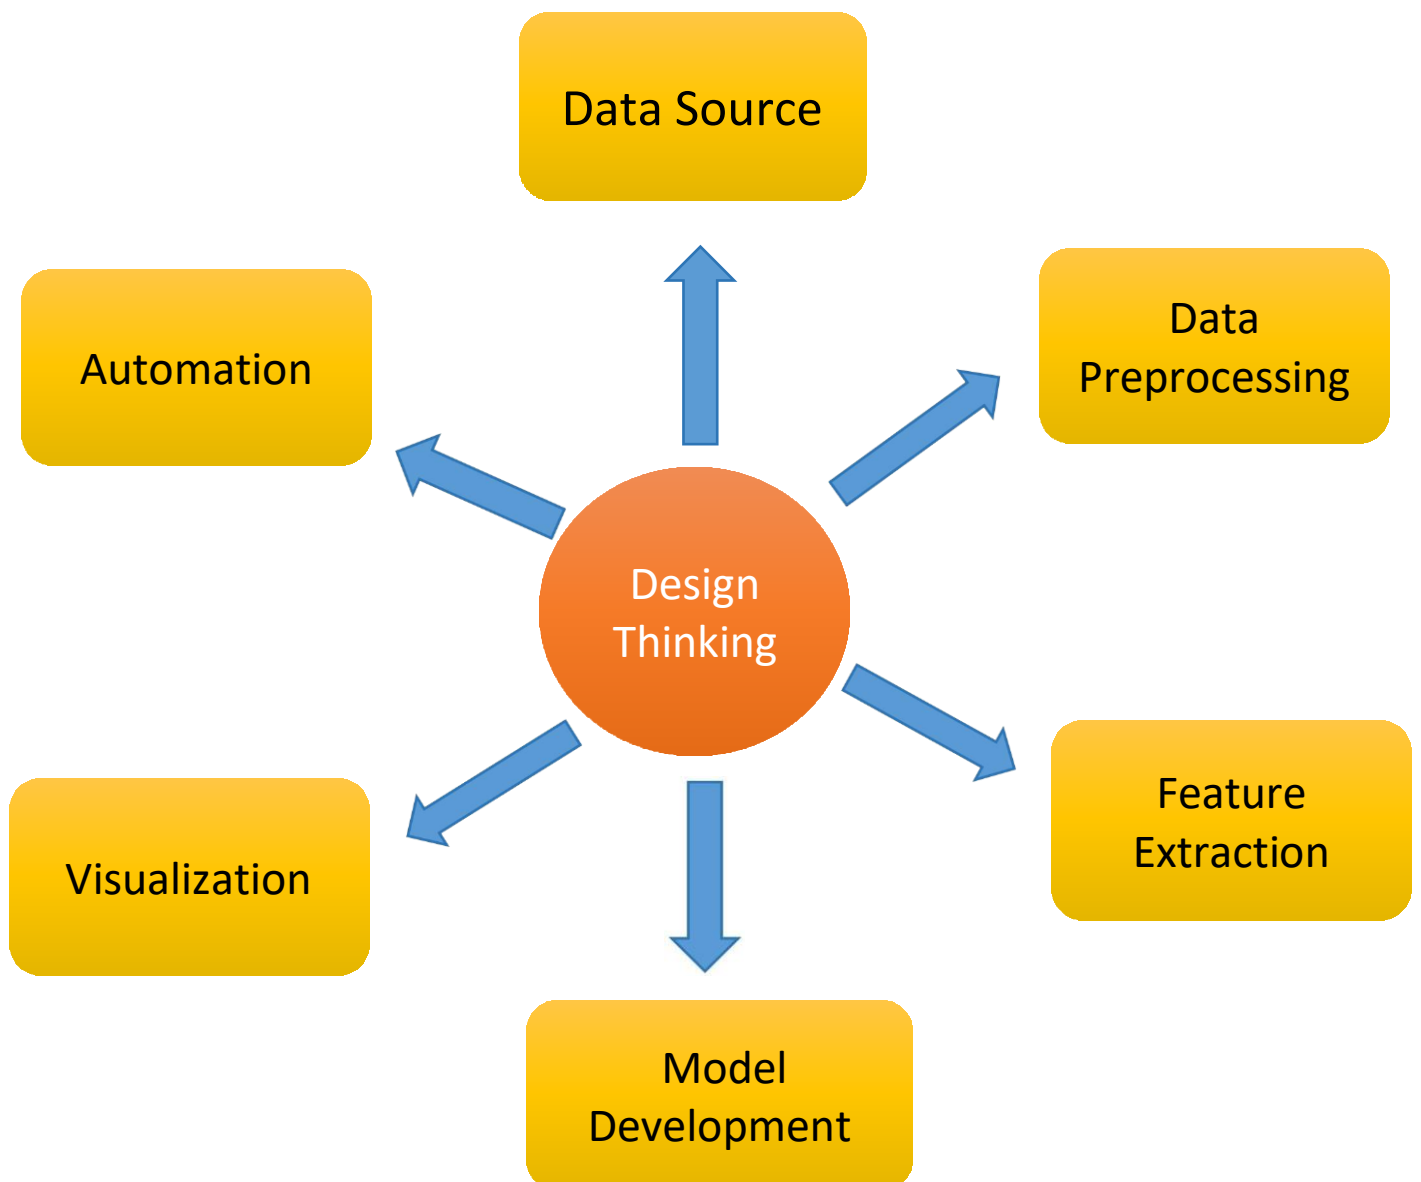

PROBLEM DEFINITION AND DESIGN THINKING

PROBLEM DEFINITION

The problem at hand is to create an automated system that measures energy consumption, analysis the data, and provides visualizations for informed decision making. This solution aims to enhance efficiency, accuracy, and ease of understanding in managing energy consumption across various sectors.

DESIGN THINKING

Data Source

Identify an available dataset containing energy consumption measurements.

Data Preprocessing

Clean,transform and prepare the dataset for analysis.

Clean

Analysis

Transform

Feature Extraction

Extract relevant features and metrics from the energy consumption data.

Model Development

Utilize statistical analysis to uncover trends, patterns and anomalies in the data.

Visualization

Develop visualization (graphs,charts) to present the energy consumption trends and insights.

Visual Insights

Charts

Automation

Build a script that automates data collection, analysis and visualization processes.
